Yi Yang

New York, NY | linkedin.com/in/yiyang0 | github.com/YiYang02 | yiyang02.github.io

Skills

Languages: C#, TypeScript, Python, Java, SQL, PowerShell
Backend: .NET 8 and .NET 10, ASP.NET Core, Node.js, PostgreSQL, Redis, SQLite, DynamoDB
Distributed systems: Kubernetes, Service Fabric, Envoy, Azure Traffic Manager, staged rollouts, canaries, failover
Cloud and tooling: Azure, AWS (EC2, Lambda, Step Functions, S3, CDK), Docker, Azure DevOps, GitHub Actions, KQL

Experience

Software Engineer, Microsoft – Teams core services – New York, NY (Remote) Aug 2024 – Present

Core API layer behind Microsoft Teams (25B+ API calls a day on average, 700+ APIs, 70+ downstream services) and Tier-0 Service Fabric platforms for enterprise Teams (36 services on ~21K VMs in 2024) and consumer Teams

- Led the final phase of the enterprise Teams API layer's move from Service Fabric to Kubernetes, cutting over 100% of US government-cloud traffic in staged ramps at 99.97% availability across 14B+ requests
- Removed 6,888 cores (~$6M a year at Azure list prices) by right-sizing a hosted Teams service's VM scale sets in 3 phases after its CPU optimization, targeting ~80% peak CPU
- Owned the .NET 8 to .NET 10 upgrade of the API layer, from dual-runtime CI gates and x64/ARM64 canaries to staged waves that kept a .NET 8 failover region per scale unit until the last public wave
- Sized capacity and stood up Kubernetes compute, Redis, Key Vault, storage, and Traffic Manager in GCC, GCC High, and DoD, then fixed pod crash loops and access errors from identity, role, and secret gaps
- Retired the enterprise Service Fabric footprint after the migration, deleting 13K+ lines of dead deployment code and removing Service Fabric packaging and signing from CI
- Wrote or co-wrote 4 design docs (release-pipeline redesign, load-balancer migration), 4 ADRs, runbooks, and a cert-rotation troubleshooting guide; onboarded a teammate and a partner team

Technologies: *C#, .NET, ASP.NET Core, Kubernetes, Service Fabric, Azure, Redis, Envoy, Azure DevOps, PowerShell, KQL*

Founder and Engineer (part-time), Stealth Startup Dec 2025 – Present

Desktop app, LLM-assisted Discord assistants, and notification services across a 20-repository platform

- Built a Node.js change-notification service that confirms each change with a second fetch before alerting, with atomic state-file replacement, persisted pending alerts, and regression tests
- Co-built 2 LLM-assisted Discord assistants in TypeScript and Python with shared PostgreSQL feeds, Notion-backed support replies, and JSON-schema publishing drafts that need staff confirmation

Technologies: *TypeScript, Python, Node.js, PostgreSQL, Electron, React*

SDE Intern, Amazon Web Services – EC2 Aardvark – New York, NY May 2023 – Aug 2023

Network-flow telemetry aggregation (2+ PB a day) for VPC Flow Logs and AWS security teams

- Extended an end-to-end canary pipeline spanning 10+ AWS services that audits new telemetry parcel types every hour, helping keep millions of parcels a day healthy

Technologies: *Java, Python, TypeScript, AWS CDK, Step Functions, Lambda, EC2, VPC, S3*

SDE Intern, Amazon Web Services – EC2 Quartz – Arlington, VA June 2022 – Sept 2022

- Reduced operational load by 7% for a core EC2 metering service (99.99% metering accuracy) covering instances, Dedicated Hosts, and On-Demand Capacity Reservations in every Region

Technologies: *Java, Ruby, DynamoDB, CloudFormation, Google Guice*

Education

Bowdoin College – B.A., Computer Science and Mathematics – Brunswick, ME May 2024

Honors: QuestBridge Scholar, Tapia Scholar, Lime Connect Fellow (2022)

Interests: Street basketball, table tennis, running, and MMA; grew up in New York City; favorite ride: Citi Bike
